

Potable Water – Mains Chlorination Equipment Specialists

The LSL Fixed Site, Mobile and Portable Chlorination Systems are utilised at optimum points throughout the Potable Water Mains Distribution Network Service for Chlorine Residual Boosting i.e. Secondary Chlorination, and other Mains Disinfection Procedures such as Emergency Chlorination and Water Mains Rehabilitation Sterilisation

A crucial and critical part of any mains rehabilitation programme is safe and effective chlorination of the water mains prior to commissioning. Unreliable, and inefficient equipment operation can cause significant problems with regards to maintaining performance targets during Water Mains Rehabilitation Projects. **Balfour Beatty on.... LSL Chlorination equipment and after sales Service.**
"We utilise the LSL chlorination equipment to great effect ... The backup service has been first class and has helped us to avoid potential lost time and customer complaints."
